Kenneth J. Shea

Kenneth J. Shea was born in Queens, New York. He received his B.S. and M.S. degrees in Chemistry from the University of Toledo. He did his graduate studies in physical organic chemistry at Pennsylvania State University. Following postdoctoral studies at the California Institute of Technology, he joined the faculty of the University of California at Irvine in 1974. His research interests are in synthetic and mechanistic organic chemistry and polymer and materials chemistry.

Bredt's Rule vs Bridged alkene

Bredt's Rule

Bredt's rule is an empirical observation in organic chemistry that states that a double bond can not be placed at the bridgehead of a bridged ring system, unless the rings are large enough.

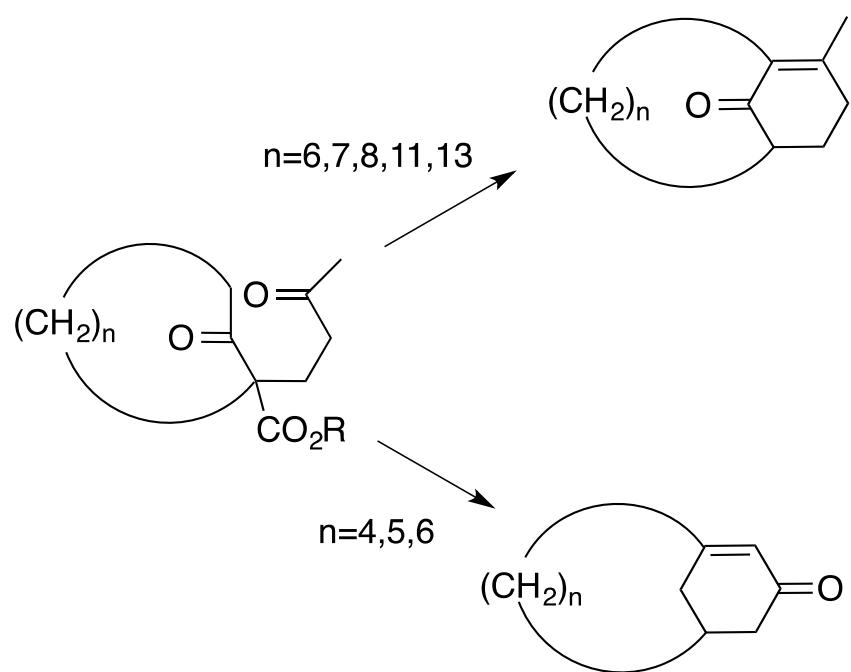

ex. norbornene

Forbidden norbornene isomers

Prelog, V., *JCS*, **1950**, 420

Introduction: Intramolecular Diels-Alder

Type I: Tether is attached at 4-position of diene.

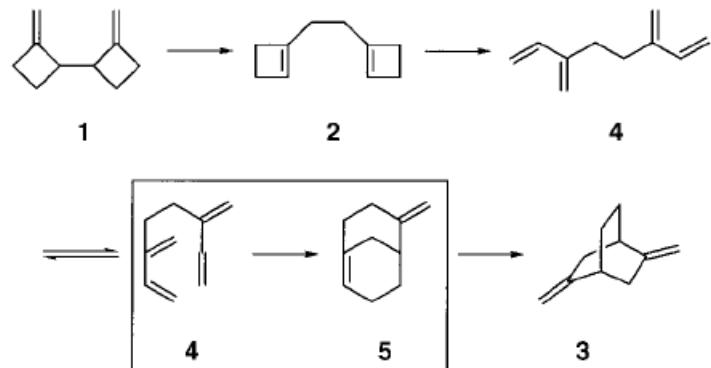

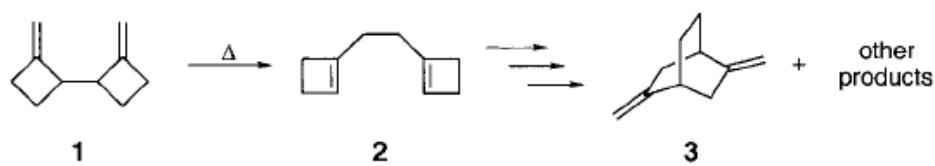

Type II: Tether is attached at 3-position of diene.

- i) Bridged products rarely observed.
(tether must be > 9 atoms)
- ii) Fused products usually have 3 or 4 atom tether.

Shea, K. J., *J. Am. Chem. Soc.*, **1978**, *100*, 6519
Shea, K. J., *J. Am. Chem. Soc.*, **1988**, *110*, 860
Shea, K. J., *Tetrahedron Lett.*, **1994**, *35*, 7311

Type II Intramolecular Diels-Alder

Scheme 1. Proposed reaction cascade leading to 3.

Table 1. Type 2 IMDA cycloadditions of acyclic trienes.

Starting material	Conditions	Product	Conversion [%]
6	420 °C, 23 s	7	32
8	455 °C, 5 s	9	55
10	510 °C, 8 s	11	29

> 300 °C
Accidental discovery during a mechanistic study
of the Cope rearrangement.

Shea, K. J., *J. Am. Chem. Soc.*, **1978**, *100*, 6519
Shea, K. J., *Angew. Chem. Int. Ed.*, **2001**, *40*, 820

Development of the Scope of the Reaction

Activated Dienophiles

Table 2. Gas-phase thermolysis of three-atom-bridged triene esters and ketones.

Starting material	Conditions ^[a]	Product	Yield [%] ^[b]
	420°C, 23 s		32
	395°C, 18 s		72
	318°C, 18 s		76
(Z)-14	365°C, 12 s		15 ^[c]
	390°C, 12 s		30

[a] Atmospheric pressure, N₂ carrier gas; thermolysis temperature and contact time are given. [b] Determined by GC, percentages based upon starting material remaining after thermolysis. [c] The Z isomer underwent isomerization to the E isomer under the thermolysis conditions. The cycloaddition product was identical with that obtained from (E)-14.

	455°C, 8 s		55
	398°C, 8 s		85
	420°C, 8 s		80

[a, b] See Table 2.

Lewis Acid Catalyst

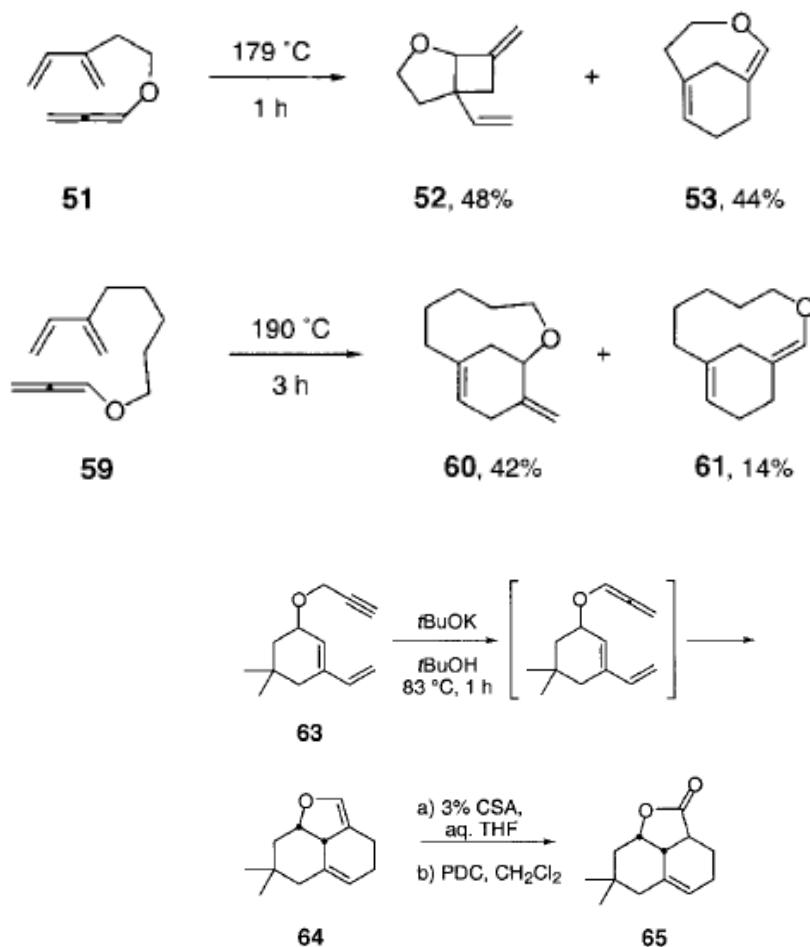

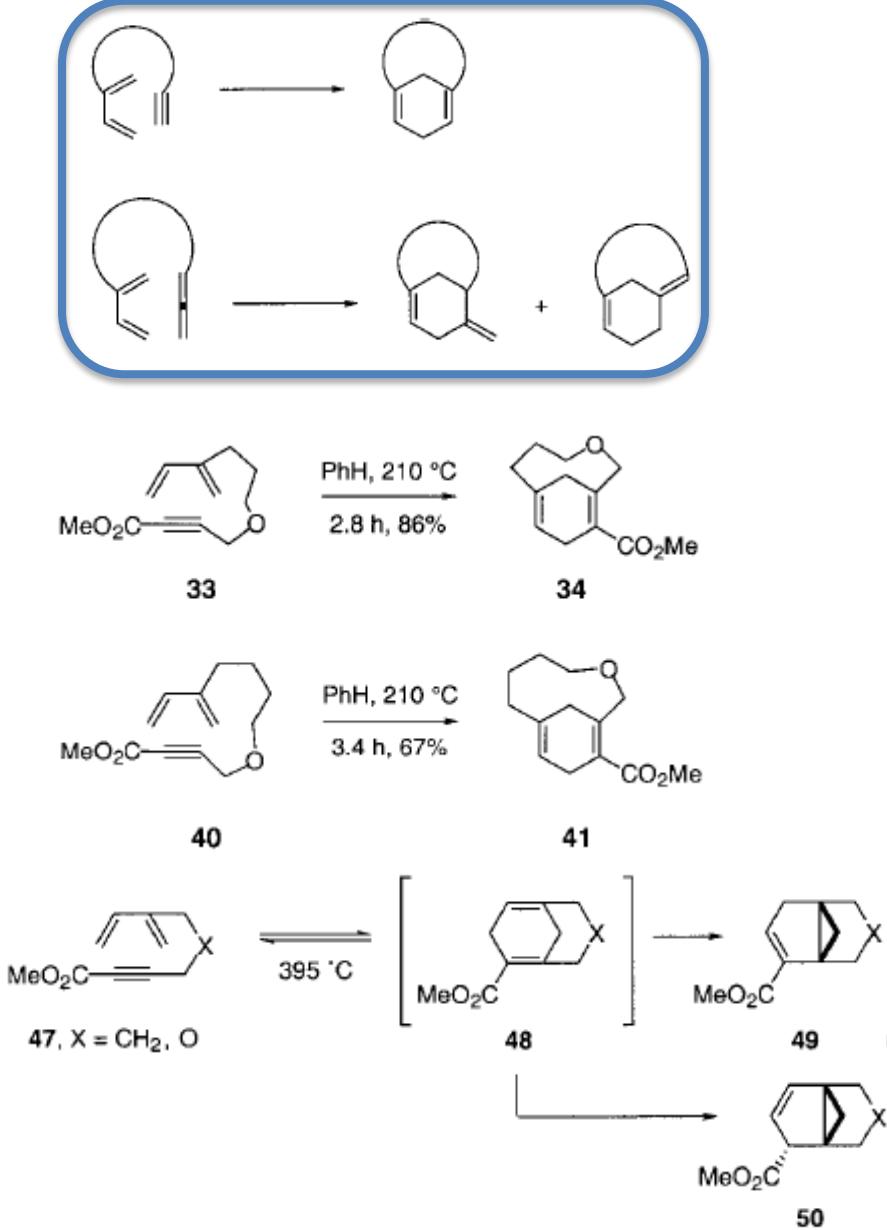

Table 5. Lewis acid catalyzed type 2 IMDA reactions.

Starting triene	Conditions ^[a]	Product	Yield [%]
	4 h, 21°C		50
	2 h, 21°C		75
	1 h, 21°C		71
	< 5 min, 21°C		70
	12 h, 21°C		85

[a] In CH₂Cl₂ with Et₂AlCl as Lewis acid; thermolysis temperature and reaction time are given.

Shea, K. J., *J. Am. Chem. Soc.*, **1982**, *104*, 5708
 Shea, K. J., *J. Am. Chem. Soc.*, **1985**, *107*, 4791

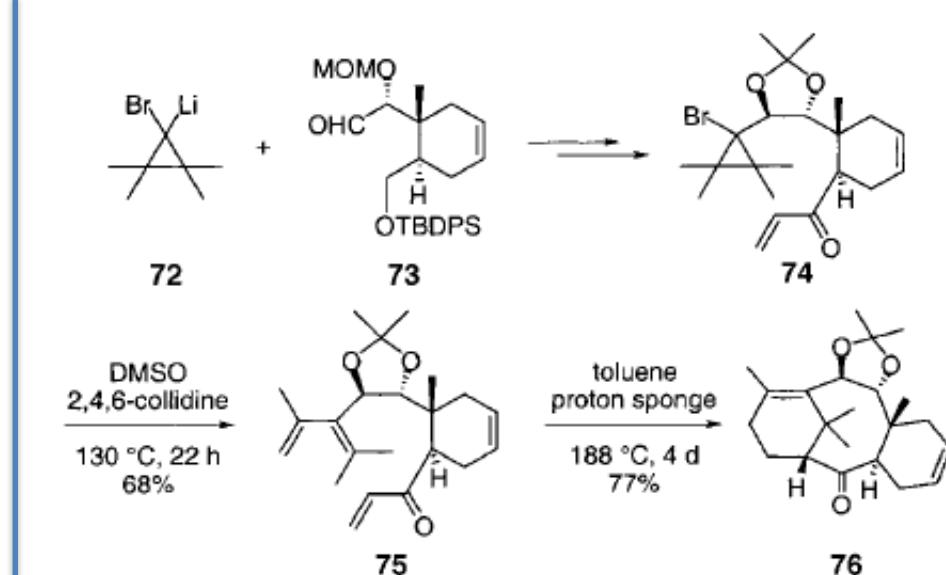

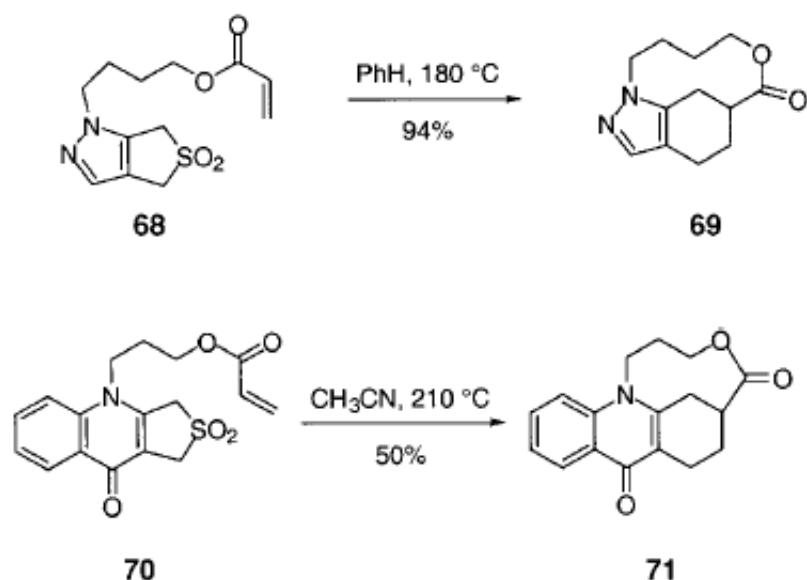

Acetylenic and Allenic Dienophiles

Scheme 5. Kanematsu's approach to tricyclic compounds using an allene dienophile. CSA = camphorsulfonic acid, PDC = pyridinium dichromate.

Shea, K. J., *Tetrahedron Lett.*, **1990**, *31*, 6843
 Kanematsu, K., *Tetrahedron Lett.*, **1986**, *27*, 4205

Masked Dienes and Dienophiles

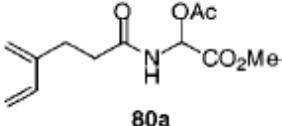

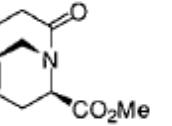

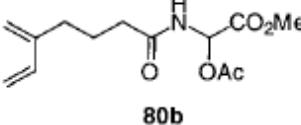

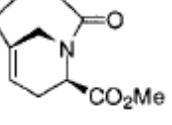

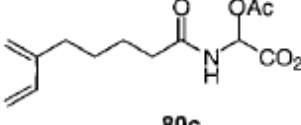

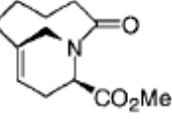

Scheme 7. Synthesis of advanced taxusin intermediate **76**.^[32]

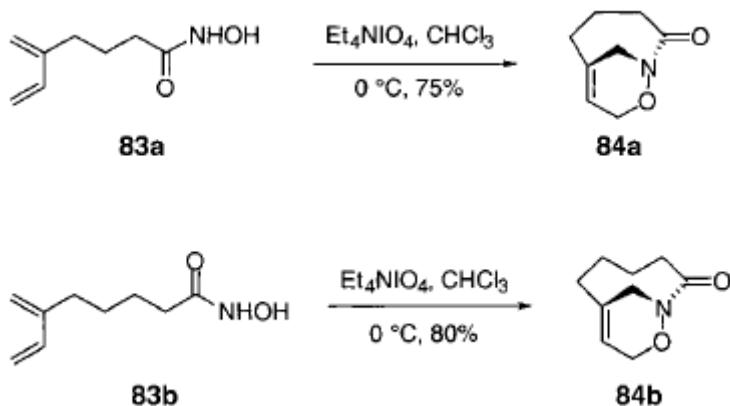

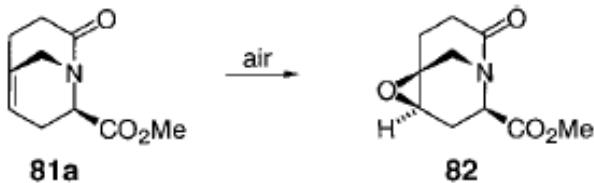

Chou, T. S., Chen, H. C., *Tetrahedron Lett.*, **1996**, *37*, 7823
Chou, T. S., Chen, H. C., *Tetrahedron Lett.*, **1999**, *40*, 961

Hetero Diels-Alder Reactions

Table 7. Intramolecular acyl iminium Diels–Alder cycloadditions.

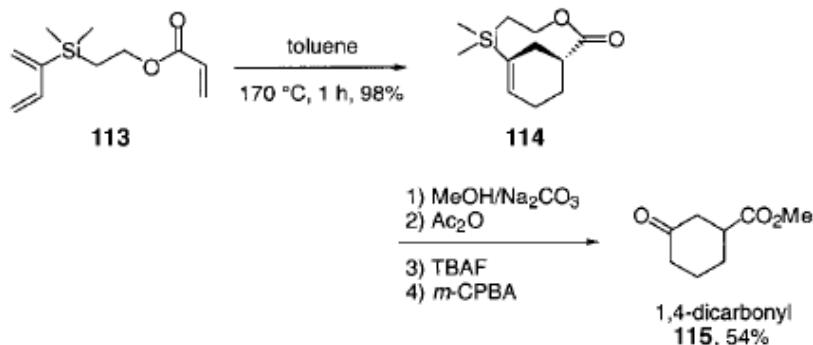

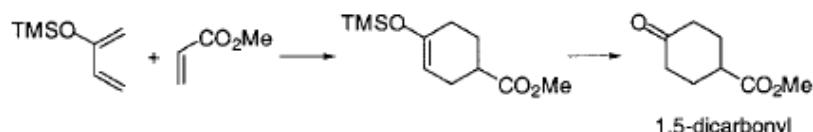

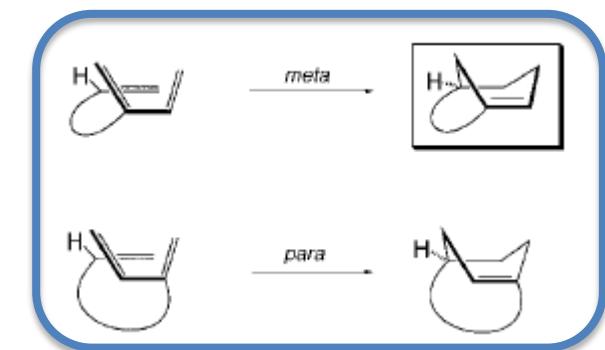

Starting material	Conditions ^[a]	Products	Yields [%] ^[b]
	250 °C, 2 min		29
	200 °C, 2 h		82
	215 °C, 2 h		76

[a] Reactions were performed in xylenes at 0.01M. [b] Yields refer to isolated products after chromatography.

J. Am. Chem. Soc., **1996**, *118*, 4711

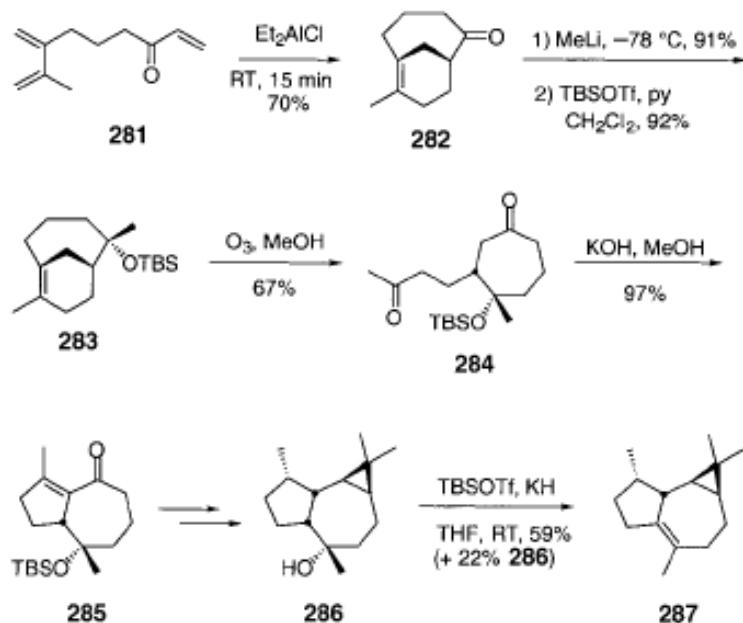

Total Syntheses of *Plocamium* monoterpenes, ledol and ledene

insect antifeedant property
cyclohexane with 3 stereocenters and halogens

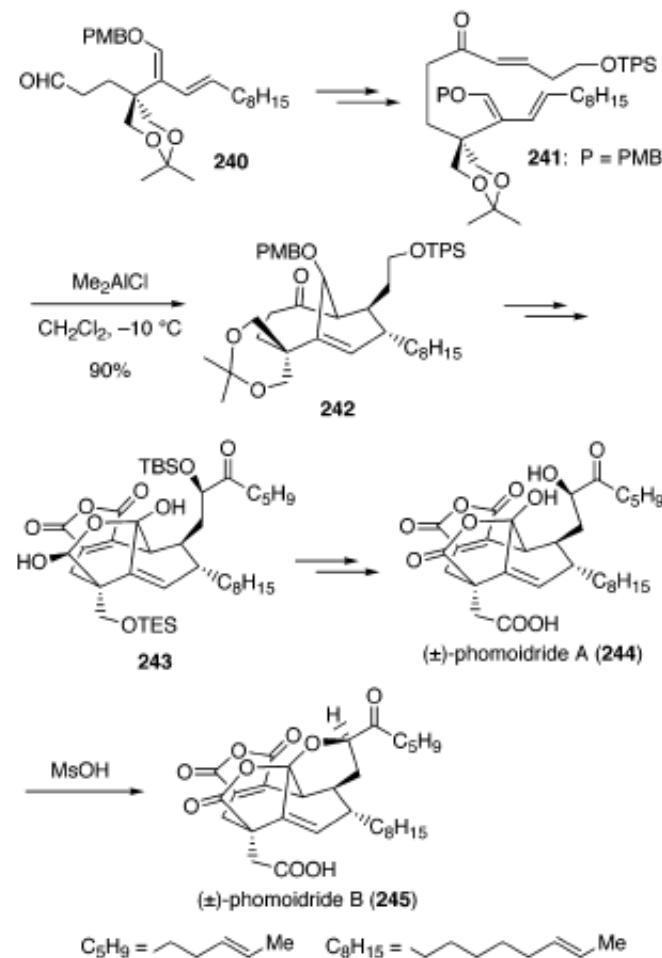

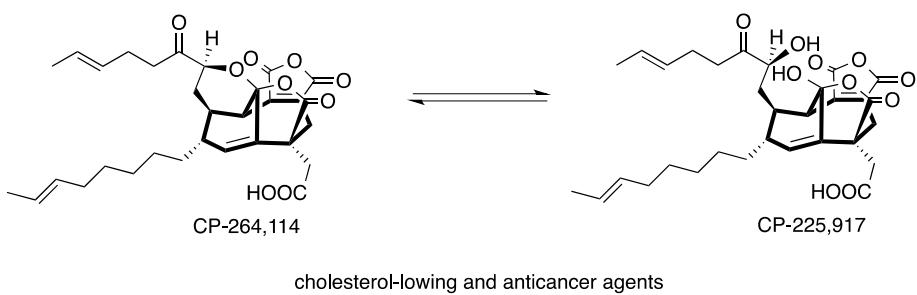

Scheme 44. Our synthesis of *Plocamium* monoterpene **280**.

Scheme 45. Our synthesis of ledol (**286**) and ledene (**287**).

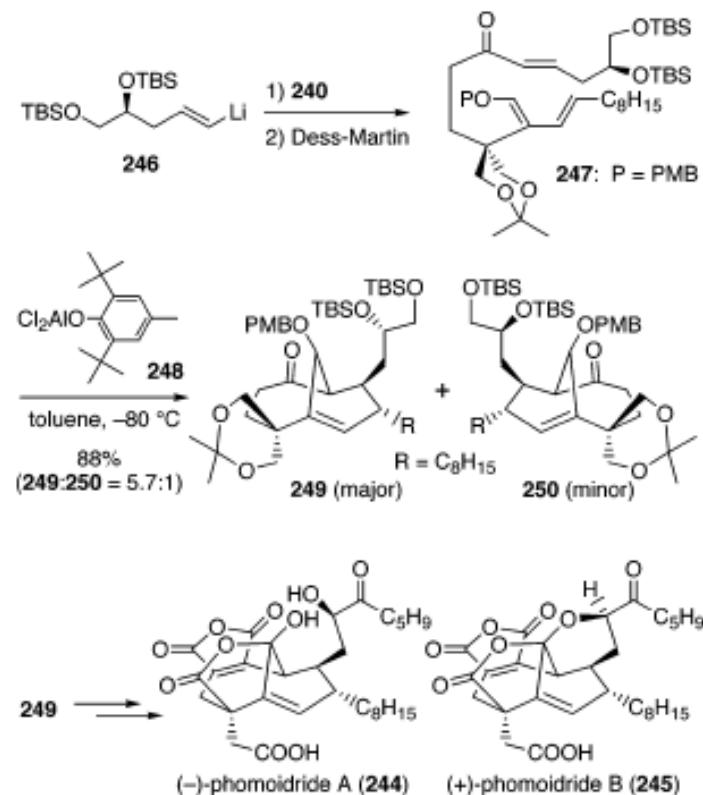

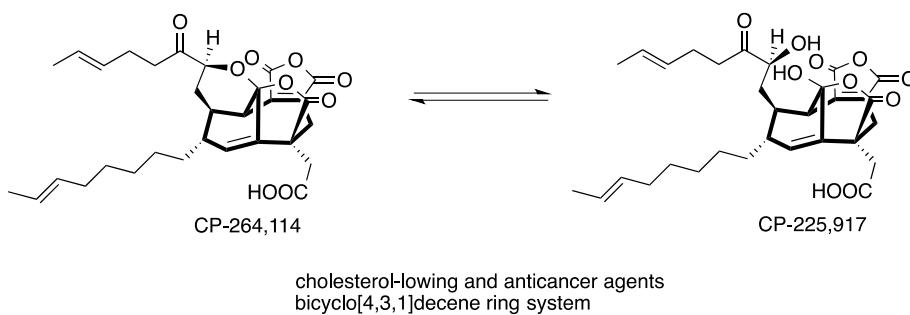

Shea, K. J.,
J. Org. Chem., **1996**, *61*, 7438
J. Org. Chem., **1997**, *62*, 8962

Total Synthesis of CP-264,114 (racemic)

Nicolaou, K. C.,
Angew. Chem. Int. Ed., **1999**, *38*, 1676
Angew. Chem. Int. Ed., **2000**, *39*, 1829

Total Synthesis of CP-264,114 (asymmetric)

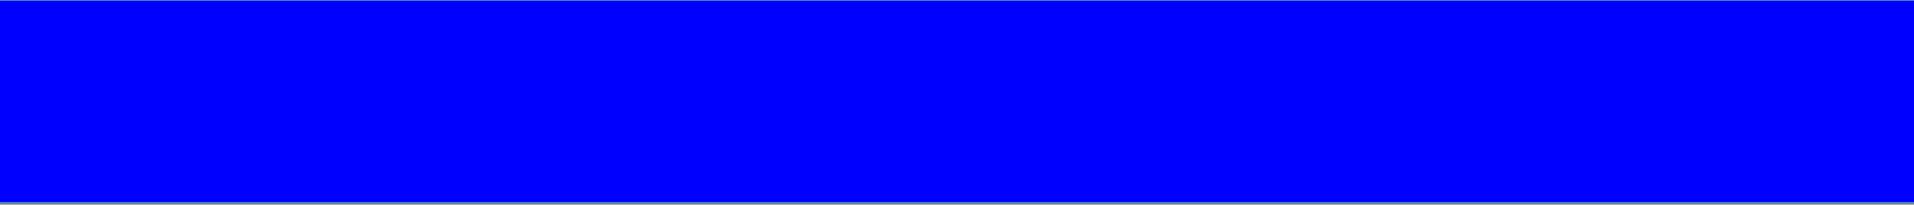

Nicolaou, K. C.,
Angew. Chem. Int. Ed., **1999**, *38*, 1676
Angew. Chem. Int. Ed., **2000**, *39*, 1829

Conclusion

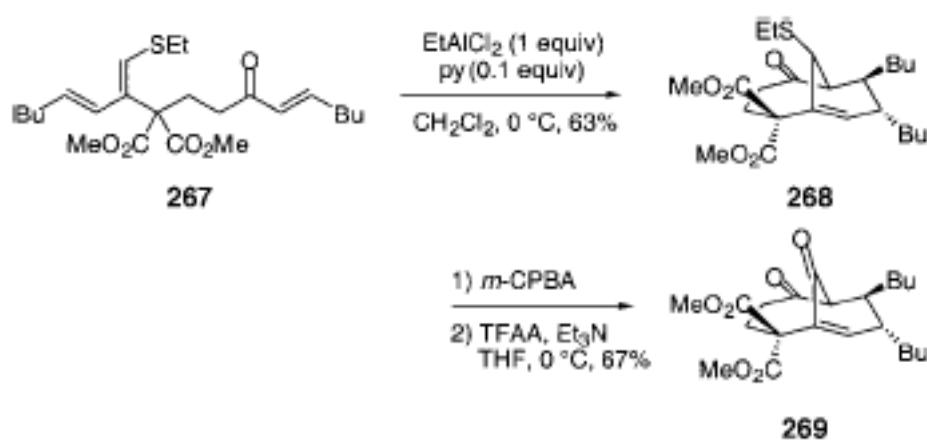

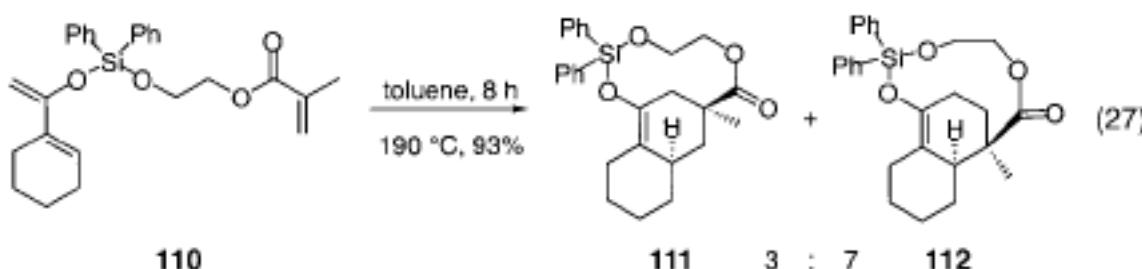

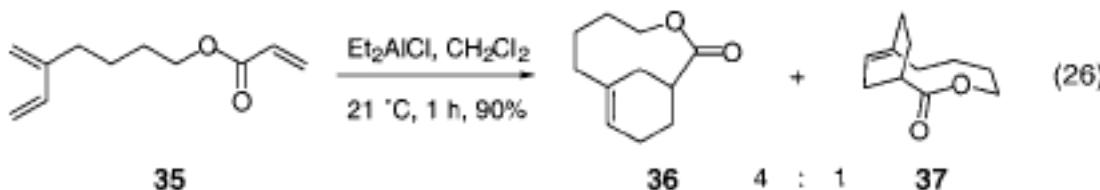

- Type II intramolecular Diels-Alder reaction
 - provideds bridgedhead alkenes
 - access to other compounds through disposable tethers, bridged to fused interchange, and ring expansion
 - the most useful synthetic method for forming 7, 8-membered rings embeded in the bicyclic structure
 - used in natural product synthesis

Thank you
